

Avast Ultimate Business Security

Avast Ultimate Business Security combines our award-winning business antivirus, data protection, our best privacy tools, and automated patch management to keep your devices and applications updated and secure.

The ultimate online protection and automation your business needs

Device & Privacy Protection

- ✓ **Secure your devices against threats**
Get more peace of mind with Avast's award-winning business antivirus that's rich with features, but won't slow your business down.
- ✓ **Stay secure and private online**
Give your employees the privacy and security they need, so they can stay productive, no matter where they're working from.

Patch Management

- ✓ **Save time with automated patching**
Cybercriminals exploit unpatched software vulnerabilities in operating systems and commonly used applications (Java, Adobe, Google Chrome, Zoom, etc.) as part of targeted attacks. Avast Business Patch Management will automatically address vulnerabilities on your software and third-party applications to keep your business safe.

Business Hub

- ✓ **Security that grows with your business**
As your business grows, so will your security needs. Our online management platform, the Avast Business Hub, makes it easy to manage all your devices and security services from one place — anytime, anywhere.

48 million

Avast prevents over 48 million **cyberattacks** daily

300 million

Each month, Avast protects users from 300 million **visits to malicious sites**

400 million+

Avast protects over 400 million **users**

1.5 billion+

Avast blocks an average of over 1.5 billion **malware attacks** per month

33 million+

On average, Avast blocks over 33 million **phishing attacks** each month

3 million

Each month, Avast blocks an average of 3 million unique **phishing URLs**

4 million+

Avast blocks an average of over 4 million **ransomware attacks** per month

Features

Security Features

File Shield

Scans programs and files saved on your PC for malicious threats in real-time before allowing them to be opened, run, modified, or saved. If malware is detected, File Shield prevents the program or file from infecting your PC.

CyberCapture

Detects and analyzes rare, suspicious files. If you attempt to run such a file, CyberCapture locks the file from your PC and sends it to the Avast Threat Lab where it is analyzed in a safe, virtual environment.

Web Shield

Scans data that is transferred when you browse the internet in real-time to prevent malware, such as malicious scripts, from being downloaded and run on your PC.

Firewall

Monitors all network traffic between your PC and the outside world to protect you from unauthorized communication and intrusions. Firewall can prevent sensitive data from leaving your PC and can block attempted intrusions by hackers.

Mail Shield

Scans your incoming and outgoing email messages in real-time for malicious content such as viruses. Scanning only applies to messages sent or received using a mail management software (email clients such as Microsoft Outlook or Mozilla Thunderbird). If you access your web-based email account via an internet browser, your PC is protected by other Avast shields.

SmartScan

Scans for malware, outdated applications, unsafe settings, and suspicious add-ons.

Sandbox

Allows you to browse the web or run an application in a completely isolated, safe environment. When you run an application in Sandbox, your activity and web content is contained, which prevents damage to your PC. This is useful when you want to run suspicious or untrusted applications without risk.

Behavior Shield

Monitors all processes on your PC in real-time for suspicious behavior that may indicate the presence of malicious code. Behavior Shield works by detecting and blocking suspicious files based on their similarity to other known threats, even if the files are not yet added to the virus definitions database.

Wi-Fi Inspector

Scans your network for vulnerabilities and identifies potential security issues that open the door to threats. This feature checks the status of your network, devices connected to the network, and router settings. Wi-Fi Inspector helps you secure your network to prevent attackers from accessing it and misusing your personal data.

Real Site

Secures you against DNS (Domain Name System) hijacking. Some malicious programs can redirect you from an authentic URL to an inauthentic one to acquire sensitive information such as usernames, passwords, and credit card details.

Rescue Disk

Enables you to scan your PC when your system is not running. This method significantly increases your chances of detecting and removing malware because the malware is unable to counteract. If you suspect your PC is infected with malware and all other antivirus scans were unable to resolve the issue, you can use Rescue Disk.

Security Browser Extension

Scans sites for authenticity and blocks malicious ads.

Remote Access Shield

Prevents Remote Desktop Protocol (RDP) exploits and brute-force attacks by allowing you to choose who can remotely access your computer and block unwanted connections.

Data Shredder

Allows you to irreversibly erase your files or drives so that there is no way for anyone to restore and misuse your data.

Exchange Server Protection

Scans and filters emails at the Exchange server level – stopping potential attacks before they spread to the network.

SharePoint Server Protection

Checks all files uploaded onto shared storage to ensure malware cannot compromise data.

Privacy Features

SecureLine VPN

Functions as a private tunnel through the internet that encrypts your data and secures your connection when using public Wi-Fi connections, such as those in cafes or airports. SecureLine VPN has servers in several locations, which means you can bypass geolocation restrictions and access your favorite content while traveling.

Webcam Shield

Prevents applications and malware from accessing your PC's webcam without your consent. With Webcam Shield enabled, untrusted applications cannot capture images or videos, or send the content outside of your PC to compromise your privacy.

Password Protection

Prevents applications and malware from viewing, changing, or deleting passwords that are saved in your Google Chrome, Mozilla Firefox, Microsoft Edge, and Avast Secure Browser browsers.

Patch Management Features

Flexible Deployment Schedules

Schedule and deploy patches at specific times, or manually deploy to groups or individual devices.

Intuitive Dashboard

Manage all software patches and view graphical summaries of installed, missing, or failed patches from any device.

Customizable Patches

Choose software vendors, products, and the severity of patches to scan and install. Easily create exclusions for applications.

Hundreds of Patches

Deploy patches for Windows operating systems and hundreds of supported third-party software applications for comprehensive protection.

Update Agent Capabilities

Download patch installation files once to an update agent that seamlessly distributes them to all managed devices in the network, reducing network traffic.

Comprehensive Reporting

Easily determine the health and security of device software with a variety of easily configurable reports.

Automatic Scans

Schedule patch scans to run automatically every 24 hours, and set patches to deploy on a specific day. These default settings can be customized at any time.

Patch Management is currently only available for Windows.

Available with our online management platform, the Avast Business Hub

Easily set up and install your protection, monitor devices, manage your subscriptions, and more from one place — anytime, anywhere.

On-premise management not available.

Business Hub (online management platform) features:

- Intuitive dashboard
- Comprehensive reporting
- Device and policy management
- Centralized alerts & notifications
- Real-time commands
- Network Discovery & remote deployment
- Basic Remote Access and support tool

Integrated Services (available as add-ons in the Business Hub)

- Premium Remote Control
- Cloud Backup
- Web Control (coming in 2022!)

About Avast Business

Avast delivers easy-to-use, affordable, and award-winning cybersecurity solutions for small and growing businesses. Avast provides integrated security services to protect your devices, data, applications, and networks. Backed by 30 years of innovation, we have one of the largest, most globally dispersed threat detection networks in the world. Our cybersecurity solutions are built to provide maximum protection so that you can worry less about cyberthreats and focus more on growing your business.
